

# Make a Link That Opens in a New Window

By default, when your users click a hyperlink on an Extend web site, it opens the new page in the same browser window. In some cases, you might want to specify that the new page opens in a new window. You can do this by changing the target.

1. Point to **Site** and click **Article Manager**.
2. Click the article to which you want to add the list.
3. Under **Actions**, click **View/Edit Properties**.
4. Select the link you want to edit.
5. Right click the link and select **Edit Link**. The Link dialog box displays.
6. Click the **Target** tab. This tab is only visible in links to other content pages or web pages, not for links to anchors or email.
7. In the **Target** drop-down list, select **New Window (\_blank)**.
8. Click **OK**.
