

Adding Borders and Color to Content Areas

When you publish content, you can add borders and color to content areas. With borders and colors, you can create definition between content areas.

Adding Borders

You can add horizontal borders to content columns and horizontal and vertical borders to content rows. Borders add style and definition to a channel page by framing the content areas and rows. Horizontal borders always display below the content area or content row.

1. Point to **Site**, then click **Channel Manager**.
2. Select the channel on which the content item is published.
3. Under **Actions**, click **Layout Channel**.
4. At the top of the content row column, click **Display Options** . The Custom Display page displays.
5. Click the **Styling** tab.
6. Under **Horizontal Border**, select the **Width**, **Style**, and **Color** of the border.
7. Click **Save**.

Note

To add horizontal borders, the content row column must contain multiple content items.

1. Point to **Site**, then click **Channel Manager**.
2. Select the channel on which the content item is published.
3. Under **Actions**, click **Layout Channel**.
4. On the content row heading bar, click **Edit Row**.
5. Under **Horizontal Border**, select the **Width**, **Style**, and **Color** of the border.
6. Click **Save**.

1. Point to **Site**, then click **Channel Manager**.
2. Select the channel on which the content item is published.
3. Under **Actions**, click **Layout Channel**.
4. On the content row heading bar, click **Edit Row**.
5. Under **Vertical Border**, select the **Width**, **Style**, and **Color** of the border.
6. Click **Save**.

Note

To add vertical borders, the content row must contain multiple columns.

Adding Background Colors

You can add background colors to content areas, content rows, local columns, and global columns. Background colors can attract attention to important content. When you add background colors to content areas, the colors do not affect the content item.

1. Point to **Site**, then click **Channel Manager**.
2. Select the channel on which the content item is published.
3. Under **Actions**, click **Layout Channel**.
4. At the top of the content area, click **Display Options** . The Custom Display page displays.
5. Click the **Styling** tab.
6. In the **Background Color** field, enter a hexadecimal color value. To select the color, click **Color** .
7. Click **Save**.

1. Point to **Site**, then click **Channel Manager**.
2. Select the channel on which the content item is published.
3. Under **Actions**, click **Layout Channel**.

4. To add background color to a local column, click **Local Column** . To add background color to a global column, click **Global Column**  **Global** .
 5. In the **Background Color** field, enter a hexadecimal color value. To select the color, click **Color** .
 6. Click **Save**.
1. Point to **Site**, then click **Channel Manager**.
 2. Select the channel on which the content item is published.
 3. Under **Actions**, click **Layout Channel**.
 4. On the content row heading bar, click **Edit Row**.
5. In the **Background Color** field, enter a hexadecimal color value. To select the color, click **Color** .
 6. Click **Save**.

Adding Banners

You can create colorful banners that display at the top of content areas on channel pages. Banners can attract attention to important content. They display only on channel pages.

1. Point to **Site**, then click **Channel Manager**.
2. Select the channel on which the content item is published.
3. Under **Actions**, click **Layout Channel**.
4. Point to , then click **Customize Display** . The Customize Display page displays.
5. Click the **Banner** tab.
6. In the **Banner Text** field, enter the text that you want to display on the banner.
7. In the **Text Color** field, enter a hexadecimal color value. To select the color, click **Color** .
8. In the **Background Color** field, enter a hexadecimal color value. To select the color, click **Color** .
9. Click **Save**.
