

# Facility Scheduler Database Information

All ACS web applications are built on [MS SQL Server](#). MS SQL Server is an enterprise level, industry leading database solution provided by Microsoft. MS SQL Server is an excellent choice for ACS Technologies' hosted, web-based applications.

## Key features of SQL Server

- Enables high availability (Uptime) by providing technologies that protect data against human error and minimize disaster recovery time.
- Offers performance and scalability by delivering an infrastructure that allows for growth.
- Provides security by providing built-in features that protect data against unauthorized access.
- Enables easier management and support by IT professionals by providing a full suite of management tools.
- Encourages developer productivity by supporting full range of ANSI-92 SQL, triggers, stored procedures, and many other high-level features.
- Allows remote access to data via web services.
